

UISEONG GARLIC

User Manual

A definition processor that brings weak, buried sources forward without simply turning them up.

Bring buried detail into focus

Definition first, then articulation, placement, and control.

Uiseong Garlic helps weak or buried sources read more clearly in a mix. Bite sets the overall amount of Definition. Attack, Forward, and Tight decide how that Definition arrives, where it sits, and how cleanly it holds after the onset.

COMPATIBILITY

MACOS

AU / VST3 / AAX

WINDOWS

VST3 / AAX

AUDIO

Mono / Stereo

Matching input and output

Product version 1.0.0. Format availability follows the current release.

FIRST SOUND

- 1 Raise Bite until the source becomes easier to locate.
- 2 Set Attack for a softer or crisper first edge.
- 3 Use Forward to place the source back or front.
- 4 Increase Tight until post-onset masking clears.
- 5 Match Output against bypass before deciding.

WORKING PRINCIPLE

Bite is the main Definition control. At 0%, the supporting character controls have no meaningful Definition to shape. Start with Bite, then refine the result.

Interface overview

Six user-facing controls, mapped to the current production UI.

- | | | | | | |
|---|-----------------------|---------------------|---|----------------|--------------------------|
| 1 | Preset Browser | 11 starting points | 4 | Forward | Back to front placement |
| 2 | Bite | Overall Definition | 5 | Tight | Loose to controlled tail |
| 3 | Attack | Soft to crisp onset | 6 | Output | Final level trim |

Build Definition, then decide where it goes

Bite creates the working amount. Attack, Forward, and Tight shape how it is perceived.

MAIN CONTROL

Bite

DEFINITION

Set the overall amount of focus and articulation first. With Bite at 0%, the character controls have no meaningful Definition to shape.

ATTACK

SOFT <-> CRISP

Shapes the first edge. Higher settings make the onset read more clearly, not simply louder.

FORWARD

BACK <-> FRONT

Changes perceived placement and articulation. It is not simply a brightness control.

TIGHT

LOOSE <-> TIGHT

Controls body and masking after the onset so Definition stays clear.

ONE WORKFLOW

01

Set Bite

Amount

02

Shape Attack

Onset

03

Place Forward

Position

04

Control Tight

After the hit

LISTENING CUE

If the source is clearer but still feels distant, adjust Forward before adding level. If the first hit is clear but the body clouds it again, raise Tight before adding more Bite.

Shape Definition by ear

Ranges and defaults come from the current production parameter set.

CONTROL	SHAPES	LISTEN FOR
Bite 0-100% default 45%	Overall Definition amount and the strength of the complete workflow.	Buried detail becoming easier to locate, with clearer articulation and stronger focus.
Attack 0-100% default 50%	The first moment of Definition, from softer to crisper onset.	The initial hit becoming more clearly outlined without reading as a simple level boost.
Forward 0-100% default 50%	Perceived front-to-back placement and midrange articulation.	The source moving forward in the mix without relying only on brightness or level.
Tight 0-100% default 35%	Post-onset body and masking, from loose to controlled.	Less lingering blur after the attack while the source keeps its useful weight.
Output -18 to +12 dB default 0 dB	Final manual level trim after the Definition workflow.	A fair processed-to-bypass comparison at a matched listening level.

LEVEL MATCH

Output is a final manual trim. Match processed and bypassed levels before judging the change in Definition.

Start from a real preset

Use the preset for direction, then set Bite and Output for the track.

Buried Vocal

START: VOCAL FORWARD

B44 A38 F68 T42

For a vocal that is audible but sits behind the arrangement.

Weak Guitar

START: PICK DEFINITION

B47 A64 F58 T48

Clarifies the pick and keeps the line easy to follow.

Snare / Percussion

START: DRUM IMPACT

B54 A76 F46 T56

Gives the first strike a firmer outline and controls the body.

Bass Articulation

START: BASS ARTICULATION

B43 A60 F52 T66

Helps note starts read without turning the bass into a bright sound.

Dull Synth

START: SYNTH OUTLINE

B39 A40 F62 T46

Moves a soft or covered synth forward with moderate Definition.

Pluck / Melodic Hit

START: FIRST STRIKE

B48 A72 F40 T34

Emphasizes the first edge while leaving the sustain relatively open.

SIMPLE FLOW

01

Set Bite

02

Shape Attack

03

Place Forward

04

Control Tight

05

Match Output

Factory presets

Presets set Bite, Attack, Forward, and Tight. Output stays where you left it.

PRESET	BITE	ATTACK	FORWARD	TIGHT
Default	45%	50%	50%	35%
Subtle Lift	28%	42%	44%	30%
First Strike	48%	72%	40%	34%
Step Forward	46%	42%	72%	38%
Clean Tail	42%	44%	48%	72%
Vocal Forward	44%	38%	68%	42%
Pick Definition	47%	64%	58%	48%
Drum Impact	54%	76%	46%	56%
Bass Articulation	43%	60%	52%	66%
Synth Outline	39%	40%	62%	46%
Hard Edge	74%	82%	76%	70%

PROJECT RECALL

Your DAW saves all five knob values and the selected preset with the project. Reopening the session restores the last complete state.

AFTER MANUAL EDITS

Adjusting a knob after choosing a preset saves the edited values. The displayed preset name stays selected instead of changing to Custom.

PRESET WORKFLOW

Output is independent of the factory presets. Keep your level match in place while auditioning character, then refine Bite, Attack, Forward, and Tight for the source.
