

JEJU CITRUS AIR

User Manual

An octave-led shimmer reverb that keeps vocals present or lets instruments bloom into a wider late field.

Product version 1.0.0 | Manual edition 2026.09

Air with a clear point of view

A bright reverb field that can stay close or open into atmosphere.

Jeju Citrus Air adds airy, octave-led shimmer, a quieter fifth, and a diffused stereo tail without forcing the source out of focus. Vocal keeps early reflections closer and the tail more contained. Ambient shifts energy into a wider, longer late field for pads, guitars, pianos, and textures.

COMPATIBILITY

MACOS

AU / VST3 / AAX

Current supported formats

WINDOWS

VST3 / AAX

Current supported formats

AUDIO

Mono / Stereo

Matching input and output

Product version 1.0.0. Format availability follows the current release.

FIRST SOUND

1

Insert Jeju Citrus Air on the source or an effect return.

2

Choose Vocal for focus or Ambient for a wider late field.

3

Set Glow and Peel, then add Shine and Juice only as needed.

4

Use Mix to place the complete effect in the track or bus.

CURRENT INTERFACE

The plug-in opens at a fixed 500 x 500 layout. Drag vertically on a knob. Double-click a knob value to enter an exact percentage.

MIX AND OUTPUT

Mix is the only level control. There is no separate Output knob. At 100% the return is wet only; use your DAW fader or a following gain stage for final output level.

Interface overview

Every major control, mapped to the current production UI.

- | | | | | | |
|---|----------------|---------------------|---|--------------|---------------------|
| 1 | Modes | Focus or atmosphere | 5 | Glow | Tail and sustain |
| 2 | Presets | 13 starting points | 6 | Juice | Attack-led bloom |
| 3 | Peel | Placement and width | 7 | Mix | Dry and wet balance |
| 4 | Shine | Air and shimmer | | | |

Two placements, one reverb core

The modes change balance and perspective; they do not turn Jeju into two unrelated effects.

MODE

Vocal

Keep the source forward

Use Vocal when the lyric, lead line, or attack must remain easy to locate. Early reflections stay more present, while shimmer send, width, and tail growth remain restrained.

- Lead and background vocals
- Synth leads and plucks
- Close guitars and piano

MODE

Ambient

Let the source enter the field

Use Ambient when the return should become part of the arrangement. It favors the late field, increases shimmer energy and width, and allows a longer decay while reducing early emphasis.

- Pads and sustained keys
- Open guitar textures
- Atmospheric transitions

WHAT CHANGES

LISTEN FOR	VOCAL	AMBIENT
Source position	More early reflection; clearer anchor	Less early return; later perspective
Shimmer	Lower send and feedback	Stronger send, octave lift, and return
Width	More contained around the source	Broader decorrelation and stereo field
Tail	Base decay range	Longer decay at the same Glow setting

DECISION CUE

If the effect makes the performance feel farther away than intended, return to Vocal before lowering every control. If the return feels too attached to the source, try Ambient before adding more Mix.

Shape the field by ear

All continuous controls use a 0-100% range. Defaults are shown beside each name.

CONTROL	SHAPES	LISTEN FOR
Peel 0-100% default 40%	Early-reflection spacing, diffusion, and stereo spread.	Low values feel tighter. Higher values soften the edges, open the width, and place the source deeper.
Shine 0-100% default 30%	Air, octave-led shimmer level, upper-tone lift, and gentle motion.	Raise it until the halo becomes audible. High values add a wider, brighter, more animated top layer.
Glow 0-100% default 35%	Tail length, feedback, damping, and shimmer sustain.	Short settings stay close. High settings bloom longer and carry more luminous sustain.
Juice 0-100% default 25%	How strongly the wet field responds to attacks instead of steady sustain.	Higher values make accents bloom while sustained notes leave more space around the source.
Mix 0-100% default 35%	Balance between the original signal and the complete wet field.	0% is fully dry; 100% is wet only. Values between them blend the original signal and the reverb.
Shimmer Mode Vocal / Ambient default Vocal	The balance of early placement, late field, shimmer send, width, and decay.	Vocal stays anchored. Ambient moves the source toward a wider, longer, more atmospheric return.

OUTPUT NOTE

Jeju Citrus Air has no separate Output parameter. Mix runs from fully dry at 0% to wet only at 100%. Set final level with the channel or return fader in your DAW.

Start from a real preset

These starting points use the current factory values; set Mix for the song, not for the page.

Lead Vocal

START: VOCAL AIR | VOCAL

P32 S46 G34 J24

Add air around the line while keeping its center easy to locate.

Background Vocal

START: VOCAL SHINE | VOCAL

P38 S56 G40 J28

Brighter shimmer and a little more tail help stacks sit behind the lead.

Synth Lead

START: CITRUS SHINE | AMBIENT

P46 S62 G44 J24

A brighter, wider halo for a lead that can share space with the mix.

Pad

START: CITRUS DREAM | AMBIENT

P66 S50 G72 J36

Long, open bloom for sustained material and slow harmonic movement.

Guitar

START: FRESH AIR | VOCAL

P34 S48 G34 J18

A light upper halo without turning the pick and body into a wash.

Piano

START: OPEN HALL | AMBIENT

P52 S25 G55 J22

A broader, longer field with restrained shimmer brightness.

Ambient Texture

START: LIGHT BLOOM | AMBIENT

P56 S40 G50 J58

Attack-led blooms create motion while steady layers keep breathing.

SIMPLE FLOW

01

Choose the mode

02

Set Glow + Peel

03

Shape Shine + Juice

04

Match with Mix

Factory presets

Presets set Mode, Peel, Shine, Glow, and Juice. Mix stays where you left it.

PRESET	MODE	PEEL	SHINE	GLOW	JUICE
Default	● Vocal	40%	30%	35%	25%
Citrus Room	● Vocal	30%	20%	22%	28%
Soft Plate	● Vocal	46%	32%	38%	18%
Open Hall	● Ambient	52%	25%	55%	22%
Citrus Shine	● Ambient	46%	62%	44%	24%
Fresh Air	● Vocal	34%	48%	34%	18%
Peel Bloom	● Ambient	66%	32%	50%	52%
Vocal Air	● Vocal	32%	46%	34%	24%
Vocal Shine	● Vocal	38%	56%	40%	28%
Pluck Space	● Vocal	44%	38%	28%	62%
Citrus Wide	● Ambient	72%	36%	56%	24%
Light Bloom	● Ambient	56%	40%	50%	58%
Citrus Dream	● Ambient	66%	50%	72%	36%

PROJECT RECALL

Your DAW saves all six controls and the selected preset with the project. Reopening the session restores the complete setting and refreshes the interface.

IN YOUR DAW

Choose the 13 named presets inside the plug-in. Parameter automation and manual adjustments are saved with the session.

PRESET WORKFLOW

Keep Mix at the musical balance you already established, then audition presets for character. Choosing a preset changes the four character controls and the mode together; it does not overwrite Mix.
